

DATA SHEET - PIASTRA PSD SOFT TRANSPARENT

FEATURES

- The Piastra PSD soft transparent plate is made from a technical moulding material of high aesthetic quality: Ethylene vinyl acetate (EVA).
- The softness and colorless transparency of the plastic means that using the plate on precast elements does not damage the face finish.

APPLICATION

- Ideal for storing lightweight precast elements with a perfect face finish.
- Used in the transport of precast elements to protect the corners on which the safety belt is stretched for safe transport without the risk of damaging the element itself.

ADVANTAGES

- The particular softness of EVA allows the belts to be securely clamped without them slipping, causing the precast element to tip over and be damaged as a result.
